(54) FORGERY PREVENTIVE SHEET

(57) Abstract:

PROBLEM TO BE SOLVED: To confirm forgery preventive information, to get verifying into difficulty and to make a forgery or alteration of securities difficult by arranging a fluorescent print layer of a fluorescent material for absorbing an ultraviolet ray to emit a visible ray between both transparent and ultraviolet transmittable base materials obtained by adhering the two materials.

SOLUTION: A print layer 4 is provided on one side surface of a base material 1 for constituting a forgery preventive sheet, and a fluorescent print layer 3 is provided as forgery preventive information printed with a fluorescent ink on the other side surface. The layer 4 is provided on one side surface of a base material 2, no layer is provided on the other surface, and the other surface of the material 1 and the other surface of the material 2 are laminated to form a forgery preventive sheet. The ink used for masking is adapted to a white color or the like hard to affect an influence to a color or printing with good adhesive properties of the materials 1 and 2. Materials of the transparent and ultraviolet

transmittable base materials 1, 2 are adapted to a polypropylene, polyethylene or the like. The ink is excited by a light having a wavelength of 200 to 300 nm, and adapted to a fluorescent material for emitting with a visible ray.
